

Caravans are generally measured and described using body length, an example is our Coromal 535, that is 5.3 metres long (1st 2 numbers). But, generally a caravan park or ferry needs your overall length, end to end including draw bar, spare tyre, toolbox etc. In our case 7 metres or 22'9". Fill out, print, cut along lines and place in wallet for reference, the spares can be stored in your glove box and taken into the caravan park office. If you want, you can add your van's weight or vehicle's make, length and weight.
